

THE TALENT OPERATING SYSTEM · THE ENTRY INSTRUMENT

The First Rung

The Kayan Internship Programme Standard

الدرجة الأولى — معيار برنامج التدريب الداخلي في كيان

We do not hire interns to help. We hire them to begin their record — real, supervised, evidence-logged work that ends in a Kayan Card and an honest verdict.

لا نستقطب المتدربين لمساعدتنا، بل لبدأوا سجلهم المهني.

KAYAN INNOVATION, ENTREPRENEURSHIP & WORK ENVIRONMENTS LLC · ADEN

OWNER: CEO (PEOPLE & CULTURE, INTERIM) · EFFECTIVE 30 JUNE 2026 · SUPERSEDES KAY-HR-INTERN-001

The first entry on a *professional record*

Kayan's whole thesis is that nothing is self-declared and everything is earned. An internship that consists of errands and observation would contradict the institution that runs it. So the programme is built backwards from its output: a young person who leaves with documented, supervisor-scored, institutionally-witnessed work on a Kayan Card — the first rung of the Trust Ladder, in a market that has never given a student a way to prove anything. The intern adds real capacity to a live operating system; the institution adds the first verifiable chapter to a career. Both sides earn.

HOW IT OPERATES

What this is	The standard for every internship Kayan runs — tracks, briefs, gates, assessment, stipend, inclusion, and the conversion path onto the Trust Ladder.
Who it binds	Every supervisor, the People & Culture function (CEO, interim), the Finance Lead, the Forge Lead, and every intern.
Why it exists	To turn first work experience into first verified evidence — and to give Kayan a deliberate, inclusive pipeline of future verified talent, pod members, and hires.
When it is used	Whenever a line lead signs a real need; two cohorts a year, aligned to Forge cycles, 6–10 interns each.
Forms & tools	The Intern Brief (one page, signed), the weekly evidence log, the mid-review form, the capstone QA checklist, the verdict letter, the Kayan Card.
Key risks	An intern used as cheap labour; a brief never written; evidence never logged; a verdict never given; inclusion treated as decoration.
Review	Each term, by the CEO with the supervisors — tracks change as the institution's needs change.

The five intern rules — the founding rule, scaled down, never waived

- ◆ **No signed brief + no named supervisor = no internship.** The institution that refuses to start work without a SOW refuses to start an internship without a brief.
- ◆ **Real deliverables, never errands.** Every track produces results an operating system actually needs; "help out" is not a deliverable.
- ◆ **Evidence logged weekly.** Work that is not logged was not done — the log is the future Card record.
- ◆ **Paid like everything else at Kayan.** The stipend is released against confirmed deliverables, bank-paid, on time — the intern's first experience of how this institution treats money.
- ◆ **A verdict, never a vanish.** Every internship ends with an honest written assessment — both ways. No intern is strung along; no intern leaves unread.

What the intern receives

Real work inside a live operating system; a named supervisor and a written brief before day one; a weekly cadence of plan and review; a documented evidence record; a stipend paid on time; a desk and a community at the Hub; and at the end — a Kayan Card carrying the first verified chapter of a career, plus a verdict that says what is true.

What Kayan receives

Genuine capacity inside the systems that need it, at a cost the institution can sustain; a watched, evidenced, twelve-week assessment of every future hire before any hiring decision; and the deliberate beginning of the bench — strong interns become verified talent, pod members, Forge candidates, and in time the institution's first officer hires.

The internship runs through gates, *because everything here does*

An intern should experience the institution's discipline from inside it, not hear about it. So the internship borrows the shape of Managed Delivery, scaled to a beginner: a signed brief instead of a SOW, weekly evidence instead of milestone payments, a capstone instead of a client deliverable, and a verdict instead of an acceptance gate. Five gates, in order, none skipped.

Six tracks, each tied to a system that *needs it*

Tracks are not invented to have interns; they exist because an operating system has real, recurring work a supervised beginner can do well. A track opens only when its line lead signs a need — the same demand-pulled discipline that governs Forge cohorts and the Ready Products catalogue. Each track carries a consistent one-page Terms of Reference, so expectations are clear and fair from day one, and each names the evidence it writes to the record.

CODE	TRACK	OPERATING SYSTEM · SUPERVISOR	THE REAL WORK	REMOTE-CAPABLE
INT-DEL	Delivery Operations	Managed Delivery · Delivery Lead	Gate documentation, tracker hygiene, client files, milestone logistics	Partly — core days at the Hub
INT-QAV	Quality & Verification	Talent Registry · QA Lead	QA checklist administration, registry verification, skill-test logistics	Yes
INT-HUB	Community & Hub	The Hub · Hub Lead	Member experience, events, women's-day programming, funnel tracking	No — the Hub is the work
INT-STO	Story & Brand	Marketing · Brand Lead	Bilingual content, Faces of Kayan, K4Y campaign support	Yes
INT-PLT	Platform & Data	Technology · Tech Lead	Platform testing, registry data, dashboards, AI-tooling support	Yes
INT-FIN	Finance & Stewardship	Finance · Finance Lead	Documentation, close-pack support, read-only reconciliation support	Partly — controlled access

THE TOR SHAPE — EVERY TRACK WRITTEN THE SAME WAY

SECTION	WHAT IT SETS
Track & system	Which track, which operating system, who supervises — one name, never a committee
The mission	One sentence: the result this internship exists to produce for the OS
Weekly deliverables	The recurring outputs, named and countable — what "done this week" means
What goes on the record	The evidence this track writes to the log, and so to the Card
What you will learn	The competencies the track develops, named from the Kayan Six
The capstone menu	Two or three bounded capstone options the OS genuinely needs
Adjustments	The accessibility and flexibility offer, stated up front — not negotiated after arrival
The path forward	The conversion triggers, in writing — what a strong term leads to, exactly

The most-needed track at any time is decided by the CEO against the work in hand — but no track ever opens without a signed need, and no intern ever arrives before their brief does.

لا يُفْتَحُ مسارٌ دون حاجةٍ موقَّعة، ولا يصل متدربٌ قبل أن يصل مُوجَّهٌ.

The briefs, *written before the people*

INT-DEL · DELIVERY OPERATIONS · MANAGED DELIVERY OS · SUPERVISOR: DELIVERY LEAD

The intern who keeps the gates honest

Mission: every project file complete, every gate evidenced, every tracker current — so the Delivery Lead's attention goes to judgement, not paperwork.

Weekly deliverables: gate-evidence files assembled and filed per project; Project Tracker updated and reconciled weekly; client-file completeness checks; kick-off and close-out logistics supported; lessons-learned notes drafted from close reports.

On the record: projects supported through gates, tracker accuracy rate, files passed audit-style spot checks. **Capstone menu:** a complete project archive rebuilt to standard; a gate-evidence checklist pack the OS adopts. **Learns:** the gate system end to end — the single most transferable discipline in the institution.

INT-QAV · QUALITY & VERIFICATION · TALENT REGISTRY · SUPERVISOR: QA LEAD

The intern who guards the record

Mission: the registry accurate and the QA machinery administered — because the Map is only as good as its data, and the gates only as good as their checklists.

Weekly deliverables: registry records verified against source documents; QA checklists prepared, issued, and filed per deliverable; skill-test sessions scheduled and administered; verification-evidence packs assembled for Ladder advances.

On the record: records verified, reviews supported, zero unfilled checklists. **Capstone menu:** a registry data-quality audit with corrections shipped; a skill-test logistics playbook. **Learns:** evidence discipline — what verification actually means, document by document.

INT-HUB · COMMUNITY & HUB · HUB OS · SUPERVISOR: HUB LEAD

The intern who keeps the room alive

Mission: members welcomed, events delivered, and the footfall-to-funnel data captured — the Hub's density is the flywheel's first push, and this track tends it.

Weekly deliverables: event setup and follow-up run to checklist; member welcome and onboarding supported; women's-day programming logistics; attendance and funnel logs current; member-initiative calendar maintained.

On the record: events delivered, members served, funnel data captured. **Capstone menu:** one member-led event series delivered end to end; the Hub's funnel dashboard populated for a full quarter. **Learns:** community operations — how belonging is built, hour by hour.

The briefs, *continued*

INT-STO · STORY & BRAND · MARKETING OS · SUPERVISOR: BRAND LEAD

The intern who tells it true

Mission: Kayan's story carried in both languages with dignity — people described by what they do, never by what they lacked, in the institution's own voice.

Weekly deliverables: bilingual social content drafted to the brand standard; Faces of Kayan pieces researched and drafted, consent documented; K4Y campaign assets supported; the content calendar maintained; engagement data logged.

On the record: published pieces AR/EN with engagement data; consent files complete. **Capstone menu:** one campaign supported launch to report; a Faces of Kayan series of three, published. **Learns:** bilingual editorial craft and the dignified-language standard.

INT-PLT · PLATFORM & DATA · TECHNOLOGY OS · SUPERVISOR: TECH LEAD

The intern who tests what the trust runs on

Mission: the platform tested, the data clean, the dashboards live — because the Map, the gates, and the Card are only as reliable as the systems beneath them.

Weekly deliverables: structured platform and form testing with bugs logged and retested; registry data entry and cleaning to protocol; dashboard updates shipped; AI-tooling experiments documented for the team.

On the record: bugs found and verified fixed, datasets cleaned, dashboards shipped. **Capstone menu:** a test-case library the OS adopts; one operating dashboard built and handed over. **Learns:** QA discipline, data hygiene, and the AI-readiness the next decade's work demands.

INT-FIN · FINANCE & STEWARDSHIP · FINANCE OS · SUPERVISOR: FINANCE LEAD

The intern who learns why the books are sacred

Mission: the documentation behind the discipline — close packs assembled, files audit-ready, reconciliations supported read-only — inside the strictest controls in the institution.

Weekly deliverables: payment and escrow documentation filed to retention standard; monthly close packs assembled; read-only reconciliation support — the intern never posts, never approves, never touches a release; receipts and rate-table records organised.

On the record: close packs assembled, files passing spot checks, zero control breaches. **Capstone menu:** a retention-standard archive rebuilt; a close-pack checklist the OS adopts. **Learns:** segregation of duties from inside it — why dual approval and the audit trail are the institution's spine.

One standard behind all six: each ToR is published with the opening; each names its supervisor, its adjustments offer, and its conversion triggers before a single application is read. The brief is the contract of the internship — and like every contract at Kayan, it is honoured to the letter or amended in writing, never quietly drifted from.

A trigger, not a hope — and a door *wide enough for everyone*

The end of an internship is the most important week of it. Conversion is written into the ToR as triggers, not left to mood or memory; inclusion is built into the design, not added at the end; and the money moves the way all money moves at Kayan — confirmed, banked, on time.

THE VERDICT — THREE OUTCOMES, ALL OF THEM HONEST

CAPSTONE ACCEPTED · SCORE ≥ 4.0

Yes — onto the Ladder

T1 Registered Member on the Trust Ladder, the Card issued with the evidence log attached, and a guaranteed seat: a Forge cohort or a pod-shadow place, the intern's choice with the supervisor's counsel. Strong interns become the institution's first hires when triggers are met.

CAPSTONE ACCEPTED · SCORE ≥ 3.5

Not yet — but a path

The Card issued with the record as it stands, a Forge seat offered to close the named gaps, and a written note of exactly what a "yes" would have required. Not-yet is a direction, not a dismissal.

BELOW THE BAR, OR ENDED EARLY

Not this path — said plainly

An honest assessment, a reference that says what is true, and the evidence log handed over — it belongs to the intern. The institution that publishes its absorption ratio does not inflate its verdicts.

Inclusion — operational, not ornamental

- ◆ **≥50% women and displaced youth per cohort** — the same intake standard K4Y holds, held here
- ◆ **A reserved share for people of every ability** where the role's competencies are met — roles designed remote-capable, adjustments stated in the ToR before applications open
- ◆ **Selection on capability, with accommodations in the process itself** — a written task instead of a timed call where that is fairer; the standard of the work never moves, the path to it does

The stipend — small money, full discipline

YER 50,000 per month, framed honestly: a stipend, not a salary — no social-insurance or tax treatment applies. But it is paid with the institution's full discipline: against confirmed attendance and deliverables, bank-paid per the Finance SOP, on time every month. The completion reward is deliberately not cash — it is the Card, the record, and the guaranteed next seat. **The first lesson Kayan teaches about money is that it arrives when the work does.**

ACCOUNTABILITY — ONE NAME PER DUTY

WHO	ACCOUNTABLE FOR
The supervisor (per track)	The brief, the deliverables, the weekly cadence, the mid-review, the Layer-2 capstone review, and the intern's wellbeing
People & Culture (CEO, interim)	Recruitment, onboarding, the programme standard, the verdict letters, the records
QA Lead	The independent Layer-3 capstone review — scored on the five dimensions
Finance Lead	Stipend payment on confirmed attendance and deliverables; the INT-FIN access controls
Forge Lead	Receiving conversions — Forge seats honoured within one cycle of the verdict
The intern	Showing up, delivering the agreed outputs, logging the evidence, learning, conduct

≥80%

COHORT COMPLETION

≥70%

CAPSTONES ACCEPTED

≥60%

CONVERSION TO THE CARD

STIPENDS ON TIME ·
VERDICTS IN WRITING

Safeguarding: every supervisor operates under the safeguarding and PSEA policy; every intern receives orientation, a code of conduct, and a safe, named channel to raise concerns — including past the supervisor. **Connected systems:** Talent Registry & the Kayan Card · Kayan Forge · Managed Delivery Standard · Finance SOP · Safeguarding/PSEA policy · the Intern Brief, evidence log, mid-review and verdict forms. Supersedes KAY-HR-INTERN-001; reflected in the People & Culture OS and the Master OS.

DOCUMENT CONTROL

Document	The First Rung — Kayan Internship Programme Standard · KAY-TAL-INT-001 · v1.0
Supersedes	KAY-HR-INTERN-001 — redesigned in full: the programme moves from an HR admin file to an instrument of the Talent Operating System; roles become line-owned tracks; the internship becomes the first evidence-generating engagement on the Trust Ladder
Owner	CEO (People & Culture, interim) · reviewed each term with the supervisors
Locked terms	Stipend YER 50,000/month · maximum 4 hours/day · twelve weeks, one renewal only against a new brief · a named supervisor and a signed brief before day one
Classification	Internal — the track ToRs publish externally at each opening

An internship ends with a verdict, never a vanish.

يُخْتَمُ التَّدْرِيبُ بِحُكْمٍ صَرِيحٍ، لَا بِصَمْتٍ وَغِيَابٍ.
