

KAYAN

Every click, a little magic.

The design language, the motion and sound, the spatial way of moving through the site, every page inside the talent portal, and every form — the complete specification behind the living prototype, for the people who will design and build it.

Document	Pairs with	Language	Brand
KAY- WEB-002 · v1.0	The living prototype (kayan.html)	Bilingual EN · AR (RTL)	Provisional · Phase F

· What this is, and the standard it holds

The site is not a brochure with pages that scroll. It is a place you travel into — an arrival that announces the brand with light and sound, a spatial journey through Kayan's worlds, and interactions that reward every touch. This codex specifies that experience completely: the look, the motion, the sound, the navigation, the portal a verified person lives in, and every form a visitor fills. It is written so a designer and a developer can build exactly what the prototype demonstrates, and go further.

The rule for the whole site: nothing is static, nothing is standard. *Every screen arrives, every element responds, every action is answered — with motion that has weight, sound that has meaning, and a calm that never tips into noise.*

· The design language

A new-era aesthetic: deep space as the canvas, gold as the single signal of light and talent, and a living particle field beneath everything. Premium, calm, cinematic. All colour is provisional and tokenised, finalised in Phase F.

Element	The specification
The canvas	Near-black deep space (provisional #080B10). Everything floats in depth over it. A fine film grain and a soft vignette give it the texture of cinema, not a webpage.
The signal	Gold (provisional #D9B65A / bright #F0D488) is the only accent that means Kayan — light, talent, the mark. Used sparingly, it always glows.
The living field	A canvas particle field sits behind the whole site — points of light that drift, brighten, and connect to their neighbours near the cursor. It is the talent, always present, becoming visible. It converges during the arrival and releases as you enter.
The worlds' accents	Each line owns one colour — Managed Delivery steel-blue, the Hub amber, Forge ember, Kayan for Yemen green — used only inside that world.
Glass & aura	Panels are frosted glass floating over the field; two large soft auras drift with the cursor to keep the space alive. Type is a confident serif for headlines over a clean sans for the rest.

· The motion & interaction language

Motion is the product's personality. It is slow, weighted, and expensive-feeling — expo-out curves, never a snap. Every one of these is built and working in the prototype.

The arrival

The K mark draws itself stroke by stroke in gold. The particle field converges toward it. The name and tagline rise into place. One button — Enter with sound — unlocks the experience and plays the sonic logo. This is the first three seconds, and it is the whole brand.

The depth journey

Scrolling is not a flat descent. Each chapter begins far away — small, pushed back in Z, blurred, dim — and flies toward you into focus as it centres, then recedes as it leaves. The site is travelled through, not read down.

Parallax tilt

The entire scene tilts subtly toward the cursor in 3D, and the auras drift against it. The space is always breathing, never flat.

The world takeover

Clicking a line does not scroll — it opens. A circular iris expands from the centre in that line's colour, the world's name fills the screen, and its proof settles in beneath. A back control irises it closed. Each line is a place you enter and leave.

Magic on every click

A custom cursor — a soft gold ring that grows over anything interactive — trails the pointer. Every click bursts a small ring of gold particles. Every hover ticks softly. Tiles tilt toward the cursor in 3D. Nothing is touched without an answer.

The chapter rail

A minimal vertical rail marks where you are in the journey and lets you jump between worlds. It reveals each chapter's name on hover, in the current language.

· The sonic signature

Sound is designed, not decorative — and never plays without the visitor choosing it. The whole system is synthesised live in the browser, so it ships with no audio files and always works.

Sound	When it plays	What it is
The sonic logo	On entering the site, and as a reprise at the close.	A warm pad swell under a rising gold motif that resolves upward, with a final shimmer. Short, memorable, and unmistakably Kayan.
The tick	On every hover over something interactive.	A tiny, quiet high tone — the sound of the interface being alive under your hand.
The chime	On a meaningful action — a choice made, a section reached, a step completed.	A soft two-note gold chime, a small reward.
The whoosh	On entering a world or opening a form.	A filtered sweep that carries the transition, so movement between spaces is felt as well as seen.

Consent first. Browsers block sound until a visitor acts, and so does Kayan by choice. Sound is offered at the door, toggled any time, and never assumed. The master signature (F-17) is finalised in Phase F; the prototype's synthesised motif stands in until then.

· The navigation paradigm

The visitor is never lost and never bored. Three ways to move, all working together:

Way	How it works
The journey	Scroll travels forward through the chapters in depth — arrival, the map, what Kayan is, the four worlds, the portal, the doors, the close. A single continuous story.
The rail	A chapter rail jumps straight to any world, and shows where you are.
The worlds	The four lines open into full-screen takeovers you enter and leave, so each can be explored without losing your place in the journey.

· Your Space — the talent portal, page by page

When a verified person signs in, they do not reach a profile page. They reach a place they belong — where the work, the standing, and the giving all live. The prototype shows the overview; here is every internal page and what is on it.

PAGE 01

OVERVIEW

The first thing you see — where you stand, at a glance.

- Your trust ladder, with your current tier marked and the next one in reach
- Delivered work, giving hours, and your card tier as live figures
- Calls for pods that match your specialism, ready to act on
- A single next action Kayan suggests for you today

PAGE 02

MY PODS

The work you are in, and what it needs from you.

- Each active pod: your role, the client's goal, and the delivery date
- The gate the pod is at (G0–G9) and what is due next
- Your deliverables and their status
- The pod's shared space and messages

PAGE 03

TRUST LADDER

How far you have climbed, and how to climb further.

- Your current tier and exactly what earns the next
- Each verification axis and its status
- Your skills tests: passed, pending, or available to take
- A person, never a machine, is named as reviewing any negative decision

PAGE 04

GIVING & CARD

The giving that earns your standing — never money, always recognition.

- Your volunteer hours, logged and verified
- Your card tier and the points behind it
- Open ways to give a skill to the community
- What your card unlocks — access and standing, never cash

PAGE 05

CALLS FOR PODS

The work you can reach, chosen for you.

- Open pod calls matched to your specialism and tier
- The role and seats open in each
- A clear way to express interest
- Why each call matched you

PAGE 06

EARNINGS

What you have earned, held, and been paid.

- What is held safely and what has been released to you
- A history of every engagement and its payout
- The status of anything in progress
- Everything in plain figures, never a hidden fee

PAGE 07

PROFILE & VERIFICATION

How you appear on the map, and how you stay verified.

- Your public presence — by work and tier, never exposed without your say
- Each verification axis and when it renews
- A way to add new work and re-verify
- Control over what is public and what is private

MESSAGES

Everything Kayan and your pods need to tell you.

- Messages from Kayan and from your pods
- Notifications on gates, calls, and verification
- Nothing lost, everything in one place

The forms — every one, in full

A form on Kayan is never a wall of fields. It is a guided passage, one question at a time, that explains why it asks, encourages as it goes, and inducts the visitor into what Kayan is while they fill it. Three entries — talent, client, partner — each specified in full. Every field group below is a step in the flow.

ENTRY A — I HAVE A SKILL (TALENT REGISTRATION)

The hero flow. A person becomes a verified member. Signup, then verification, then belonging. The prototype builds the induction, identity, specialisation, proof-guidance, and pledge steps live.

Step	What is asked	Why it is asked (shown to the visitor)
Welcome	An induction: what Kayan is, that this is joining not applying, that they can pause and return.	So they enter with understanding, not as a transaction.
Who you are	Name, WhatsApp number, email, governorate, preferred language.	So we can reach you and place you; your name stays yours and is never exposed without your say.
Prove you are you	A guided selfie against a downloadable photo standard (clear face, even light, plain background, sharp, 600×600+); optional face-match to an ID.	So a human can verify a real person, fairly. Every requirement is explained on the spot.
What you do	Domains, then specialisations within each, then sub-specialisations; a self-rated level.	So we match you to precisely the right work — and know what to test you on.
Prove it	Portfolio links and work samples; optional past clients or references.	So your verification rests on real work, not claims.
The skills test	The scheduled test for your specialisation, to a standard.	So a client can trust the tier beside your name; a machine may advance you, only a person may fail you.
Availability	Hours, remote or on-site, rate expectation (optional), openness to giving back.	So pods that fit your life and your standing find you.
The pledge	Honesty, respect, understanding that a person decides your verification, and do-no-harm.	Because Kayan runs on trust, and these are the few things everyone here holds to.
Consent & data	Data-protection acknowledgement; what is public versus private.	So you know exactly what is seen, and by whom. Identity that could endanger you is never collected.
Verification begins	A close: a real person will review what you shared. Welcome — you were always here.	So the moment of joining feels like arrival, not submission.

ENTRY B — I NEED WORK DONE (CLIENT BRIEF)

Step	What is asked	Why it is asked
What you want built	A category — a site or app, brand, content or translation, marketing, a report or proposal, data, or something else.	So we route you to the right team fast.
Describe it	Write, speak, or paste anything at all about the goal, in your own words — the intelligent capture.	The more we understand, the more accurately we name the scope, timeline, and price. This is where the real brief is captured.
The constraints	Deadline, budget band (optional), and any must-haves.	So the scope we return is real, not aspirational.
Who you are	Individual, business, NGO, government, or diaspora.	So we shape the offer and the proof to you.
How to reach you	WhatsApp or email.	So we come back with a clear scope, a fixed price, and a named date — payment protected.
Received	A close: we have it, and will return with scope, price, and date.	So the visitor leaves certain they were heard.

ENTRY C — I WANT TO PARTNER (PARTNER & SPONSOR)

Step	What is asked	Why it is asked
How you want to partner	Sponsor talent, fund a cohort, build with us, or a government partnership.	So we understand the relationship from the first click.
About you	You or your organisation, and your scale.	So we prepare the right conversation.
What you care about	The sector, cause, or community you want to reach.	So we match you to the campaign or cohort that fits — and to real impact.
How to reach you	The best contact.	So the CEO or the civic lead can take it forward personally.
Received	A close, and a promise of a real conversation, not a form-letter.	Because partnership is built with people, in dedicated sessions, never drafted alone.

The checkout is a conversation. Every ready product also carries a one-tap WhatsApp entry, pre-filled with the product — so for a known purchase, the visitor skips the form entirely and simply starts talking, on the channel they already use.

· The Hub and Kayan for Yemen — the worlds in full

The Hub — where Aden works

The Hub's world tells the truth of the place: solar-powered and always on, free and fast internet, a calm and green space on the Corniche to work, meet like minds, and build. It shows what is inside — desks and rooms, a women's safe space, full accessibility, the café as a welcome amenity rather than the point, and a home for events. Membership is presented as ways to belong, with pricing tokenised and rebuilt against the Aden market (a decision in the numbers session). The feeling is sanctuary: a reliable, dignified place to make things, in a city where that is rare.

Kayan for Yemen — a hand for the city

The civic world is the warmest. It says plainly: give a skill to your community and earn standing for it — never money, always recognition. It shows how volunteer hours build a person's card and their place, how sponsors fund the projects that give back to Aden, and the community work already done. Do no harm governs every word: the framing stays on youth, skills, and community, never on the conflict, never on a faction. It is where a person who has been given a chance turns and gives one back — and where a sponsor sees exactly what their support builds.

· Two languages, one experience

The whole site is bilingual and switches live. One control flips every word between English and Arabic and turns the entire layout right-to-left, with Arabic authored natively — contemporary, clean, no diacritics — not translated. Arabic is not an afterthought bolted on; it is a first citizen of the experience, because most of the people Kayan serves live in it.

· How this becomes the built site

The prototype is real, working front-end — the arrival, the depth journey, the worlds, the portal peek, the forms, the sound, and the bilingual switch all function. It sits on the platform specified in the developer pack: the same data model, the same registration and matching logic, the same events. This codex is the design and interaction contract; the dev pack is the engineering one. Together they are enough to build kayanwork.com in full.

KAY-WEB-002 · Experience & Interface Codex · pairs with the living prototype · brand provisional, finalised in Phase F (F-15, F-17) · CMS choice pending (F-18).
