Batch 13 — Technology Operating System · Reviewed 31 May 2026 · Reviewer: Claude (expert collective) · Ref: BATCH-13_Technology_Review-Memo.md

KAYAN OPERATING SYSTEM

Kayan Innovation, Entrepreneurship & Work Environments LLC

شركة كيان للابتكار وريادة الأعمال وبيئات العمل ذ.م.م

Technology Operating Standard

معيار تشغيل التقنية

Document code	Version	Effective date	Status
KAY-TEC-001	Rev 1	30 June 2026	ACTIVE on signature

Classification: INTERNAL. Document owner: Lead Developer (Mustafa Haney); CEO final authority on architecture; second developer Alaa. *Connecting Excellence, Empowering Growth!*

1. Status and authority

Canonical within the Operating System. Tech decisions reconcile here. Facts reconcile to KAY-GOV-LF-001; data and security implementation reconcile to KAY-COM-005 (Data Protection SOP). Mustafa Haney is cost-shared 50/50 with CauseWay under KAY-FIN-002; Alaa is Kayan-dedicated. Both paid EGP 18,000/month via InstaPay.

2. The platform proposition

Kayan's technology is institutional infrastructure, not a product. It exists to operationalise the Operating System: the Trust Ladder registry, the Managed Delivery gate sequence, the engagement and pod workflow, the financial ledger interface, the QA review workflow, the Hub access and booking, the Forge cohort administration, and the public-facing presence. The platform is built to be reliable before it is built to be feature-rich, secure before it is built to be flexible, and auditable before it is built to be efficient. Every other consideration is downstream of these three.

3. The platform surface

Surface	URL / context	Day-One capacity
Public marketing site	kayanwork.com	Company profile + service catalogue + intake forms
Talent registration	kayanwork.com/talent	T0 registration + status tracking
Forge subdomain	forge.kayanwork.com	Cohort announcements + applications + handbook portal
Hub member portal	kayanwork.com/hub (Q3 2026)	Member login + booking + billing view
Operations console	ops.kayanwork.com (internal)	Trust Ladder registry, pod formation, gate tracking
Finance console	ops.kayanwork.com/fin (restricted)	Escrow, payments, FX, payroll, reporting
Document portal	docs.kayanwork.com (internal)	Canonical document repository with versioning

4. Day-One vs. roadmap

Day-One (30 June 2026): marketing site live; talent registration capturing T0; intake forms wired to ops@kayanwork.com; manual operations through Google Workspace + spreadsheets behind the scenes. Q3 2026: ops console MVP with Trust Ladder registry and pod-formation workflow. Q4 2026: Hub member portal + Forge subdomain. Q1 2027: full integrated platform with finance console and document portal. The phased approach matches operational learning to platform capability — we do not build features ahead of operational need.

5. Build team

Role	Person	Capacity
Lead Developer	Mustafa Haney (Cairo)	50% Kayan / 50% CauseWay; full-stack
Second Developer	Alaa (Cairo)	100% Kayan-dedicated; full-stack
Technical authority	CEO Maher Farea	Architecture decisions; security sign-off
Compliance interface	Finance Lead (Compliance Designee)	Data protection, sanctions tooling
Visual identity interface	Lubna Alhakimi	Front-end design system; brand alignment
DevOps (planned)	To hire post-platform stable	Currently absorbed by Lead Developer

6. The operating principles

Six principles govern every technology decision. (i) Compliance first: every data store, every flow, every integration is examined against the Data Protection SOP and the AML regime before it is built. (ii) Auditability second: every consequential action logs who, when, what, and from where; logs are immutable and retained ten years. (iii) Simplicity third: the platform does what the OS requires and no more; speculative features are deferred. (iv) Reliability fourth: uptime targets and monitoring precede new features. (v) Bilingual native: every user-facing surface renders Arabic and English with equal quality from the first design pass. (vi) Open standards: we pick well-supported open frameworks and avoid lock-in to single-vendor proprietary tools.

7. Vendor and infrastructure choices

Hosting: cloud VPS at a reputable provider in a jurisdiction that supports our compliance posture (Hetzner CX-series or AWS Middle East). Domain: kayanwork.com registered through a recognised registrar with two-factor authentication and locked transfer. CDN: Cloudflare. Email: Google Workspace (kayanwork.com domain) for staff; SendGrid or equivalent for transactional email. Source control: GitHub private repositories; CI/CD via GitHub Actions. Project management: GitHub Projects or Linear at team's choice. Communications: WhatsApp for member groups and casual; email for formal; Slack or equivalent for internal team.

8. Cost-share with CauseWay

Per KAY-FIN-002, the platform-related shared infrastructure (Mustafa's time, some common tooling) is cost-shared 50/50 with CauseWay. Kayan-dedicated resources (Alaa, Kayan domain, Kayan-specific infrastructure, Kayan-specific subscriptions) are fully Kayan-bourne. The monthly cost-share reconciliation is run by the Finance Lead; the annual external review is held in October.

Authority and change control

Amended only by signed revision with Master Review Log entry.

Signatures and authorisation — التوقيعات والاعتماد

Role / الدور	Name / الاسم	Signature / التوقيع	Date / التاريخ
CEO & Founder — المدير التنفيذي والمؤسس	Maher Faisal Saeed Farea	_____	____/____/2026
Finance Lead — مسؤول المالية	Tariq Ahmed Al-Mukhdari	_____	____/____/2026
